

FC 011 Tool Build Process

Objective:

To ensure that all tools & modifications are made to the required standard and quality specification such that they enable manufacture of tooling and mouldings fit for purpose.

Likewise to ensure that Orphaned tools are properly inspected and considered prior to issue.

To ensure that with all tooling we maximise moulding manufacturing efficiency, productivity and product quality requirements commensurate with the required quality standards taking into account all relevant costs likely to be incurred over the expected life of the tooling and product so as to minimise the overall total cost of the project.
