

Capix Wash Flow 360 Plus Dosing System

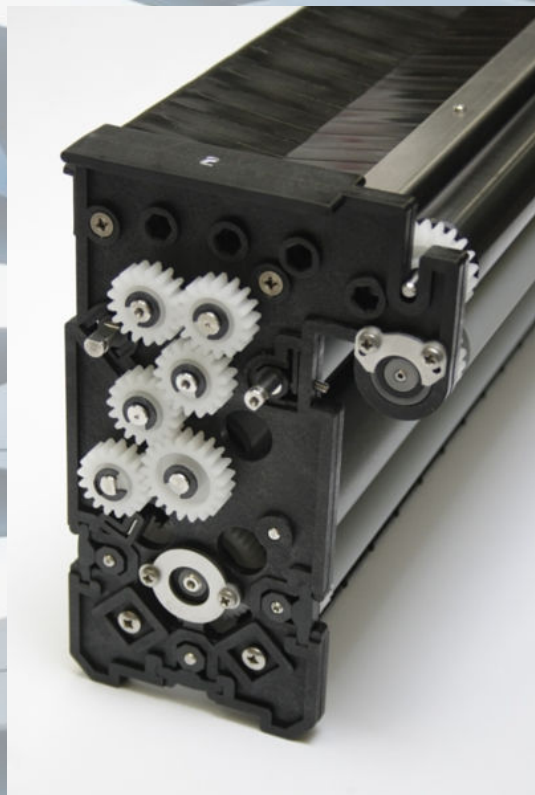

- **Take control of Algae/Bioslime problems**
- **Maintains processor wash tanks**
- **Minimises processor downtime/ maintenance**
- **Wall mounted Safety Cage**
- **Quick change of biocide concentrate**
- **Operator programmable dose/timebase**
- **Battery powered - Long-life**
- **Now with biocide low level alarm**
- **Health & Safety Compliant**
- **New installations or retrofit**

Algal growth (bioslime) in processor wash tanks can be problematic and difficult to control. This can lead to film/paper marking, scratching, overflow and transport problems, requiring costly processor downtime to clean and rectify. The Capix Wash Flow 360 Dosing System ensures an accurately metered dose of Metafix Wash Control Biocide is delivered directly into the processor wash tanks - This reduces processor downtime and the frequency of wash tank and rack cleaning and keeps you in production.

Capix Limited is a major supplier of Film & Paper Processing equipment, accessories and service support solutions for the NDT, PCB and Photographic markets and is part of Metafix (UK) Ltd.

A Range Of Cleaning Products

The Capix range of EASY CLEAN Processor Cleaning and Wash Water treatment products are specially formulated for use with film and paper processors. Easy and effective solutions for maintaining the processor and it's transport system, ensuring optimal production performance.
