Iverlight Co.,Ltd was founded in 2008, we are distributor for numerous well-respected lighting manufacturers from all over the globe. With specialized of design, development and production in decorative and commercial light fittings, which offer stylish modern and functional lighting. We can help you decide what fixtures are appropriate for your needs. If it is off-the-shelf or custom designed, we can meet your specifications.

As a commitment which refers to our products and services, we would like to provide to our privileged customers. As light always fascinated people, it becomes inspiration and passion which be a synonym and symbol of life.

Our experienced staff can be assured your confidence and satisfaction toward both product quality and impressive services.

Moreover, our experienced lighting professionals are always ready to offer a full range of your project requirement.

QisDesign
Imagine another possibility

Rising beyond traditional boundaries, our design amazes consumers by bringing them a sense-rich experience. Based on our brand philosophy-“Imagine another possibility”, we combine innovative technology and sophisticated design to achieve perfection. We aim to deliver a unique experience, not only fulfilling consumers’ desires but also stimulating their imagination.

Debuting in 2009, QisDesign is part of the BenQ Group, a \$21+ billion powerhouse comprised of 16+ Taiwan-based independent companies across numerous industries. The BenQ Group controls a highly efficient value chain with the unrivaled ability to deliver critical components and world-class solutions as well as talented and experienced experts in all critical areas of design: industrial design, graphic design, market research, user interface, mechanical design, computer-aided design and prototype production.

The BenQ Group's excellent design capabilities have won it accolades of many international awards, including Germany's iF, Red Dot and Japan's G-Mark awards.

BE LIGHT

Best. Bendable. Beautiful

The BE Light is an LED desk lamp that folds and sports a unique articulated design. With its clever hinge design, it can be fully extended to a height of 33.4 cm, and an angle of up to 135 degrees. It also provides adequate task lighting with white LED. When not in use, it can be folded down flat to a minimum height of 1.8 cm, taking up the least amount of space on a desk.

As with QisDesign's other LED lamps, the BE Light also adopts light guide technology to evenly distribute the LED light, eliminating all concerns over glare. Made of aluminum alloy, the BE Light is lightweight, yet sturdy. The refined metallic finish gives the BE Light a sophisticated and stylish feel.

BE LIGHT

MATERIAL	LED COLOR	POWER INPUT
Aluminum alloy, Die casting	Warm white	AC: 100-240V/50-60Hz DC: 12V, 2A
DIMENSION	SWITCH	CERTIFICATION
W: 45.05 CM H: 46.66 CM	Dimmable switch* (on the base)	CE E FC 11
NET WEIGHT	POWER CONSUMPTION	ILLUMINANCE
1.6 KG	12W (max.)	45 CM, 1200LUX (max.) 30 CM, 2000LUX (max.)

* Press and hold the switch button to adjust brightness.

THE SEAGULL LIGHT

Light and free

The Seagull Light, an LED lighting fixture, takes the form of a flying seagull and functions similarly too. In response to the eco trend, the light adopts LED as lighting source which consumes much less energy than traditional lighting sources, yet provides the same brightness for both ambient light and reading functions. It has two knobs on the main body, the front one for adjusting brightness and the back for adjusting lighting angles.

The “wings” would change positions in accordance with the light adjustment, imitating a seagull flapping wings to soar into the sky. The design cleverly integrates aesthetic beauty with functions, delivering not only light but also interactive fun to users.

SEAGULL
LED TABLE

MATERIAL	LED COLOR	POWER INPUT
Aluminum alloy, Die casting, Stainless steel	Warm white Cool white	AC: 100-240V/50-60Hz DC: 12V, 2A

2.3 KG	14W (max.)	45 CM, 1600LUX (max.)

* It has two knobs on the main body, the front one for adjusting brightness and the back for adjusting lighting angles.

AURELIA LIGHT

Be allured

Mesmerizing, amazing, beautiful-Aurelia, the moon Jellyfish, evokes a sense of tranquility bordering on a trance state. So does the eponymous LED table lamp.

Inspired by the astonishing underwater creature, the energy-efficient LED lamp offers a delight for not only your eyes but also your sense of touch. With a three-way "touch ring" dimmer, it enables easy luminosity adjustment.

Glare is eliminated thanks to LED's small-size characteristic, making it possible to hide the LEDs in the center. LED's directional characteristic which lets the light reflect directly on the inner shade's strips also helps create the translucent ambience.

AURELIA
LED TABLE

MATERIAL	LED COLOR	POWER INPUT

NET WEIGHT	POWER CONSUMPTION	AVAILABLE COLORS
1.86 KG	18W (max.)	Pink Aqua Orange

THE CORAL REEF LIGHT

Serene in glory

The Coral Reef Light, an LED lighting fixture, features swivel able lighting petal of organic shape. While the floor lamp features 3 overlapping layers which can be activated independently by being swiveled, the table lamp has one adjustable layer and is activated by a touch on the stand. Serene, subtle, but yet movable, the Coral Reef Light evokes an image of the underwater world where the darkness is quietly subdued by the swaying flows of light.

CORAL REEF
LED FLOOR

NET WEIGHT	POWER CONSUMPTION	AVAILABLE COLORS
6.8 KG	24W (max.)	Silver

THE PIANO LIGHT

Play with light

Inspired by the piano, the Piano Light, an LED lighting fixture, allows users to play the light as if they were playing the piano. Utilizing LED's low-temperature characteristic, which makes it possible to touch the product's surface without being burned, the Piano Light allows consumers to interact with the light.

The illumination is made possible by a special light guide technique, another living example of how QisDesign brings technology into home decor products. Its piano-like sleek feel, coupled with the fun-to-play interface, brings consumers an amazing experience.

PIANO

NET WEIGHT	POWER CONSUMPTION	AVAILABLE COLORS
12.8 KG	32W (max.)	White

THE CORAL LIGHT

Sparkling light from the water

The Coral Light, an LED lighting fixture, is inspired by the exquisite corals in the ocean. Imitating how natural coral reflects rays of light through the living sea, the Coral Light creates a visually mesmerizing effect as it graces a table, ceiling or floor.

Thanks to a special light diffusion technique, the light emitted by the LED bulbs is evenly distributed on the edge of each diffuser. Besides serving as an ambient lighting fixture, its desk lamp, equipped with high bright LEDs, also provides a reading function.

CORAL LED
TABLE 45

MATERIAL	LED COLOR	POWER INPUT

THE CRYSTAL LIGHT

Illumination and Imagination

The Crystal Light, an LED lighting fixture, amazes consumers with its fascinating color-changing feature. It's composed of various "crystals"—shimmering with silver, sparkling like diamonds, glittering with illuminating reflection. Consumers can assemble these "crystals", each of which is connected by a magnet, into any form they desire. The interactive feature is made possible by LED's low-temperature characteristics.

Consumers can change the light mode with a remote control to create different lighting effects to fit their moods and environments. The Crystal Light not only provides consumers with illumination, but also stimulates their imagination.

CRYSTAL
LED TABLE

MATERIAL	LED COLOR	POWER INPUT
Polycarbonate	RGB LEDs	AC: 100-240V/50-60Hz DC: 15V, 1.2A
DIMENSION	SWITCH	CERTIFICATION
W: 7.3 CM H: 7.3 CM	Remote control*	CE RoHS FCC
NET WEIGHT	POWER CONSUMPTION	AVAILABLE COLORS
1.1 KG/SET**	7W (max. 15W for sets with 16 lighting units)	Silver

* Remote control used for 2 pre-programmed lighting modes:
Gradient (default) and full spectrum.
** Each crystal light set comes in 8 lighting units.

THE FLAMENCA LIGHT

Passionate and zestful, Flamenco

Inspired by the breathtaking movement of Flamenco dancer's ruffled skirt twirling around in the air, the Flamenca is an ambient light which captures the playfulness of this true essence.

With a gentle touch on the metallic-like plate, the Flamenca echoes you with the "dancing mode" which creates a soft flowing effect. Pressing and holding on the plate, you may pause at any illumination you want and hold to turn off. The design is an exciting combination of bicolor acrylics and curvy shape that achieves dreamy and bewitching lighting effect. Designed for three fabulous colors, Flamenca is suitable for decorating in multiple lifestyle scenes, including the dinning room, bedroom or any other preferable personal space.

FLAMENCA
LED TABLE

MATERIAL	LED COLOR	POWER INPUT
PMMA	Warm white	AC: 100-240V/50-60Hz DC: 5V, 1A* Battery: AAx3

CHOOSING THE PERFECT LIGHTING FOR YOUR HOME

Lighting in your home is one of those items that you don't always notice when it has a good presence and feeling when you're in the space. Although, when the lighting is poor and you are trying to perform a task, or you feel the opposite of how you would like to feel in the space, you notice it immediately. Lighting is for ambiance, aesthetics, tasks, and seeing better in your home.

Think about your home and if it has all the lighting qualities you would like.

If your answer is no, here are some tips on how to choose the perfect lighting for you and your family.

Determine what your lighting goals are:

Direct or task lighting is focused in the space you are trying to work. Ambient or indirect lighting is used for ambiance and for overall lighting of a space. Once chosen you can begin to choose lighting options. Each room in your home should have a mood you want to set, as well as a function you want your lighting to serve.

Provide lighting for safety and security on the exterior of your home:

Walkways, sidewalks, perimeter of your house, and the front entry should be lit with ambient lighting. Too dim of lighting on the exterior is a welcome sign for intruders. While too bright of exterior lighting is costly and disturbing to neighbors. Consider installing flood lights at the exterior corners of your home that are motion activated to further deter intruders. Follow the aesthetics and security lighting of your neighborhood for further guidelines as to what to implement at your own home.

Use exterior wall sconces for decor:

Outdoor lighting doesn't have to only be utilitarian. Wall sconces can provide washes of light against the exterior walls of your home to create ambiance in the evening hours. Directional sconces pointing upwards or downwards can focus on architectural elements on your home, and draw attention to exterior niches and plantings around your home.

Inside your home use multiple light sources for one space:

For rooms like the kitchen, bedrooms, and living spaces, multiple light sources will help you achieve a variety of functions and activities in that space. In the kitchen, under counter lights can provide great task lighting. While in a living room, opt for a floor lamp next to a couch or favorite reading chair. In bathrooms the lighting at the mirror should be free from shadows and glaring light.

For high ceilings and modern decor use recessed lighting:

"Can" light fixtures, so called because of the metal recessed "can" that is inserted into the ceiling and the light fixture fits inside. These fixtures are subtle and can be directional, and can be connected to dimmer switches to give a range of light from subtly dim to full brightness to illuminate an entire room.

In nurseries and kid's rooms, remember night lighting:

Think about the lighting for when children sleep when planning lighting requirements. Night lights can help small children from being scared, but can also help parents navigate through dark rooms. For nurseries consider a dim wall sconce, or table lamp that can be used for changing diapers, or rocking infants to sleep.

In formal living and dining areas, research chandeliers wisely:

In spaces that a formal chandelier is considered, choose one that will not date your space. Often time's chandeliers are bought without thinking of the space and the decor that surrounds it. Chandeliers come in extremely simple designs that include faux candles, small bulbs, or a few lights to the ornate and expensive crystal varieties. Whichever is your decor choice, measure out the space, and ceiling height before ordering to ensure enough head room will be available below the hanging chandelier.

Don't be afraid when choosing lighting for your home, it can help your ambiance and mood in the space. If you need lighting help ideas get inspiration from lighting stores, catalogs, and online decor and fashion blogs/magazines. Just like the color of your rooms, lighting should enhance your space and make it feel warm and inviting!

TOOLS & MATERIALS

WALL LAMP

Wall lamps can be turned on by selecting the use option on the wall it is attached to. Wall lamps can only be on the south or east side of a wall.

CEILING LAMP

Ceiling lights can not only light up your whole room – they're a great way to show off your style, too. From spotlights to flush ceiling lamps to pendants that make a design statement, we have a wide selection to help you fit your space, style and lighting needs.

TABLE LAMP

Table lamps let you fine-tune the atmosphere of a room in more ways than one. They give you additional light where you need it while also adding a bit of personality. Ours are available in a wide selection of styles to add a little extra color, texture and light to your home.

FLOOR LAMP

Floor lamp lighting can help to add extra style to a room as well as making the most out of open and empty space. There are many designs of floor lamp lighting to pick from. So it should be easy to find one which you like and will mesh well with your home.

PENDANT

Pendant lights are often used in multiples, hung in a straight line over kitchen countertops and dinette sets or sometimes in bathrooms. Pendants come in a huge variety of sizes and vary in materials from metal to glass and plastic. Many modern pendants are energy-saving low voltage models and some use halogen or fluorescent bulbs.

CHANDELIER

Chandeliers are often ornate, and normally use lamps. Crystal chandeliers have more or less complex arrays of crystal prisms to illuminate a room with refracted light.

LIGHTSWITCH

Light switches may be single or multiple, designed for indoor or outdoor use. Optional extras may include dimmer-controls, environmental protection, weather and security protection.

LIGHT BULBS

Light bulbs components usually have a base of ceramic, metal, glass or plastic, which makes an electrical connection in the socket of a light fixture. This connection may be made with a screw-thread base, two metal pins, two metal caps or a bayonet cap.

LIGHTING IN DIFFERENT ROOMS

LIVING ROOM

This room needs to cater for a range of family requirements: reading, watching television, entertaining, children's play. So the general diffused lighting of overhead fittings is a start, but add directional lighting with spotlights and reading lamps; use recessed or surface mounted spotlights to accent features or pictures, or 'wash walls with light. Table and standard lamps can also be used to provide soft pools of light to create a relaxing atmosphere, while dimmer switches, which are wired in the same way as ordinary switches, allow you to control the overall light levels. Changing shades on your ceiling pendant or free-standing lamps is a quick and easy way to update the decor in your room – you can introduce a bit of accent colour or pattern with the minimum of fuss and without over-powering the room. Or make a statement by replacing the central single pendant with a multi-arm ceiling pendant.

DINING ROOM

Dining should be a pleasurable experience, something to linger over, so you don't want a dining room to have a cold atmosphere. You need a light over the table, but control it with a dimmer switch so that you can adjust the light level; that way, you will be able to see what you are eating without being bathed in harsh glare. Picking out features in the room with accent lighting will provide added interest, and pastel-coloured bulbs will soften the atmosphere and enhance a colour scheme.

BEDROOM

Make the most of lighting to create a cosy atmosphere in the bedroom. Use recessed spotlights, wall lights and table lamps to generate a soft light, but provide task lighting for reading in bed and using a dressing table. Free-standing uplighters can provide soft ambient lighting for adult's bedrooms, but are not a good idea for children's bedrooms, where the temptation to throw paper or objects into them makes them a fire hazard. For kids' rooms there is a range of portable lights that are both fun and safe as they're cool to touch. The range includes famous characters and has something for all age groups, boys and girls.

EXTERIOR

Whether your goal is to enhance the beauty of your home, or provide additional security, you have numerous lighting options to light up your home's exterior. These lights are both functional and fun! Extend the hours you can spend outside, or create a festive environment! The selection of lighting fixtures is of two primary types: decorative and functional. Be mindful, however that most lantern-style fixtures are glaring light sources. Hidden lights are strategically positioned around the property to selectively illuminate plant material and architecture. Add landscape lighting, deck lighting, and step lighting to not only bring out the beauty of the home at night, but also add extra security and safety.

TYPES OF LAMP BULB

GLS (GENERAL LIGHTING SERVICE)

These are the most commonly used lamps and are found in most light fittings. They may be clear, translucent (pearl) or opaque (in a choice of colours). They are available in a range of sizes and shapes, from the pear and mushroom to candle types. Large-diameter versions are available and are intended to be on view, without shades. All provide a general diffused light.

HALOGEN

Halogen lamps produce a crisp, clean white light – brighter than a standard bulb of the same wattage. They bring out the detail of an interior, and are also particularly good for reading and closework, helping avoid eye strain. They do get extremely hot, so must only be used in a suitable fitting. They are suitable for spotlights and recessed lighting.

LOW-VOLTAGE HALOGEN

Low-voltage lighting uses halogen bulbs that run at 12 volts rather than the usual 240. The current is supplied via a transformer which may be built into the light fitting, or in a separate location.

REFLECTOR

These lamps produce strong directional beams of light in spotlight and floodlight fittings. All have some form of silvering on the bulb that helps throw the light in a particular direction. Crown-silvered types direct light back on to a separate reflector that throws it forward; internally-silvered types do not need a reflector, since their design aims the beam forward. A third type, the PAR (parabolic aluminised reflector), has a conical shape and comes in a variety of beam widths.

CFL (COMPACT FLUORESCENT LAMPS)

Otherwise known as low energy bulbs, these combine the construction of a fluorescent tube with the compact dimensions of normal GLS lamps, and they will fit standard light fittings. They use about 20% of the electricity of a comparable GLS lamp. The life of the bulb varies depending on the type you buy but it is typically between 6 and 10 years. There is now a wide choice of shapes available in CFL bulbs, so there should be a low energy option available for most fittings.

LED (LIGHT-EMITTING DIODE)

Like incandescent lamps and unlike most fluorescent lamps (e.g. tubes and CFL), LED lights come to full brightness without need for a warm-up time; the life of fluorescent lighting is also reduced by frequent switching on and off. Initial cost of LED is usually higher. Degradation of LED dye and packaging materials reduces light output to some extent over time.

TUBES

These are long glass cylinders with metal end caps. Different hues of white are available in fluorescent bulbs. These range from warm white (2700K) through medium (3000K) to blue-ish white (3500K and above). The Kelvin figures are sometimes incorporated in the bulb part number (e.g. /827 for warm white, /835 for blue). Various lengths, and even circular versions, are available for a range of fittings. Their use has limitations in domestic situations, although they are ideal for garages and home workshops. Another type of tube is the tungsten-filament type, essentially a tubular version of the standard GLS lamp. This is quite small (up to 285mm long) and may be clear or pearl. In the main, this kind of tube is used for concealed lighting.

An LED lamp is a product that is assembled into a lamp (or light bulb) for use in lighting fixtures. LED lamps have a lifespan and electrical efficiency that is several times better than incandescent lamps, and significantly better than most fluorescent lamps, with some chips able to emit more than 100 lumens per watt.

Like incandescent lamps and unlike most fluorescent lamps (e.g. tubes and CFL), LED lights come to full brightness without need for a warm-up time; the life of fluorescent lighting is also reduced by frequent switching on and off. Initial cost of LED is usually higher. Degradation of LED dye and packaging materials reduces light output to some extent over time.

LAYERING THE LIGHTING

Good lighting enables activity, enhances color, and – most importantly – gives a room a sense of warmth and life. Light fixtures also bring fun and fashion to a space. Use lighting in practical and provocative ways to alter the mood in your living room.

One of the keys to creating a comfortable and flexible room is to layer the lighting. Use a mix of ambient, task, and accent lighting to delineate different zones. Establish a plan that allows you to adjust the room's illumination levels gradually from bright to dim to suit your needs.

Begin with the ambient, or general, layer; this is the light that simply makes the room visible. Next, consider the task lights you'll need for you and your family to read, work, or play. Add an accent layer – fixtures that focus on objects or architectural features you want to highlight or light sources that create specific moods.

AMBIENT LIGHTING

Think of ambient lighting as your living room's overall light wash, whether it's sunlight streaming in through the windows during the day or overhead lights casting a warm glow through the room at night. Ambient light is the basic lighting layer, illuminating walls, open areas, and main pieces of furniture so that you can navigate the space with ease. Ambient light can be direct, bounced off a wall, or diffused through a shade to warm up the quality of the light. Dimmer switches allow you to modulate lighting to suit different moods and occasions.

SUSPENDED UPLIGHTS are ceiling-mounted fixtures that cast light upward and give an even glow.

PENDANTS hang from the ceiling. They come in different shapes and styles that can add another decorative element to a room.

TASK LIGHTING

Designed to help you perform activities at close range, task lighting is a more location-specific layer of light than ambient lighting. Place wall sconces behind the sofa to facilitate reading, or use a swing-arm table lamp on a side or parson's table. Hang a pendant lamp low over a game table. Think about brightness, beam direction, proximity of the fixture to the task area, and the bulb's color temperature (its relative value of warmth or coolness) when selecting task-oriented lighting.

TABLE LAMPS come in a variety of shapes, sizes, and wattages. For versatility, choose one that takes a three-way bulb.

SWING-ARM LAMPS have adjustable arms that allow the light to be swung into position.

SCONCES attach directly to the wall and can offer useful supplementary lighting.

FLOOR LAMPS are freestanding and may be adjustable in height.

ACCENT LIGHTING

Accent lighting provides dramatic spots of light wherever you want them and is the layer that allows you to change a room's mood and style most easily. Typically using narrow-beam lightbulbs, accent lights let you direct the eye to those objects or places in the room you find most visually appealing. Spotlight a favorite painting or sculpture on a wall or mantel, highlight a pleasingly textured wall with track lighting spots, or dot candles throughout the room to create a warm, natural glow.

MINI-CHANDELIERS hang from the ceiling and add sparkle.

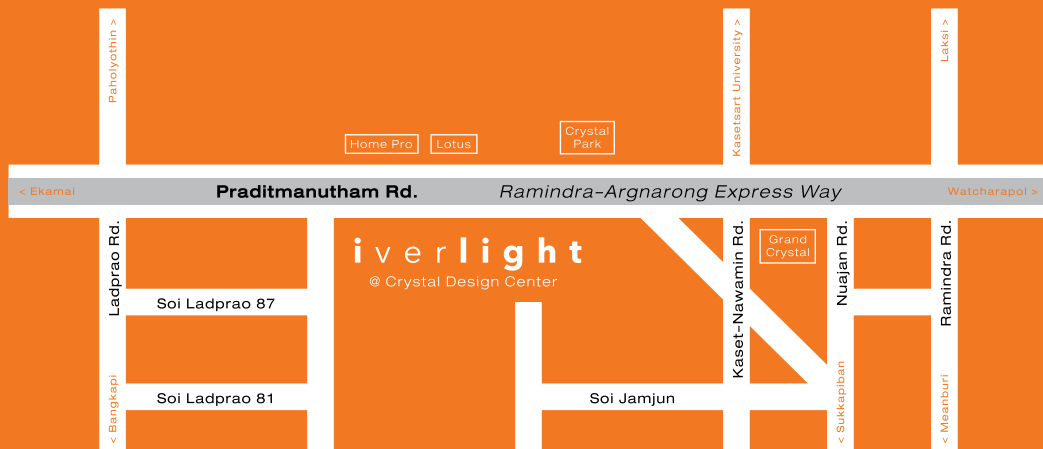

TRACK LIGHTS can be aimed to highlight architectural details and favorite objects.

CANDLES fill a room with warmth and animation; they can add color and scent as well.
