

## Product – Information

## Regummi S

Product -  
Description:

Rubber blanket regenerator

Range for use:

Cleaning, conservation and regeneration of  
rubber blankets and ink rollers.

Features:

Regummi S dissolves ink residues of major scab formations on rubber rollers and all the other parts of a machine. It is a depth-efficient regenerating medium including protective components of highest efficiency which prevent ageing or hardening of the rubber surface. An activation of the surface quality of the rubber blanket is achieved, but without any uncontrolled swelling or negative influence on the Quick-Release-Characteristic of modern rubber blankets. Regummi S does not affect unburnt positive and negative carrier printing plates. Even if concentrated it does not dissolve the diazo resin coating. CHC-free.

density: 0,85 g/cm<sup>3</sup>  
colour: red  
flash point: 40°C / VbF: All

Use annotation:

Put the Regummi S on a cloth and clean printing blankets and/or ink rollers with it.

Marks:

UN 3295, class 3, packaging group III, ADR

Units:

10 x 1 l, 10 l, 20 l metal cans  
200 l barrel
