HID

Web-based access control for small facilities

ACW2-XN

Convenient, cost-effective, web-based access control

HID Global's web-based access control solution is a self-contained access control solution for small facilities* that desire the reliability of an enterprise level hardware at an affordable price. Meet today's tougher security challenges and benefit from support for state-of-the-art identity management and mobility.

- Base solution provides access for two doors/1000 users, expandable up to eight doors with expansion modules.

- Pre-wired control box with built-in software.

- Simple to install and can be up and running in minutes.

- No dedicated PC or server needed.

- Supports award-winning identity management technologies, powered by Seos®.

Secures the Premises

Business owners regain complete control over their premises with ACW2-XN. The security risk associated with brass key and lock solutions that are easily copied, lent, lost or compromised by thieves, are mitigated.

Through ACW2-XN the entrance to a building, office, stock room, or security-sensitive area can be restricted to specific employees, during stipulated hours.
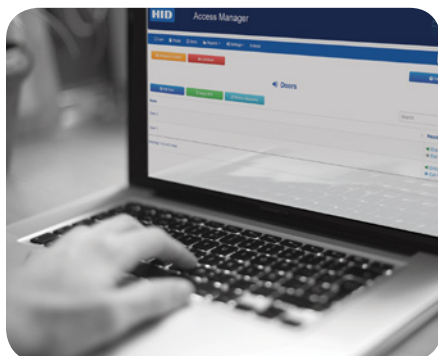

Provides 24/7 Control

Embracing new web-based technologies allows business owners to have immediate control of their premises, anywhere, any time. Grant or revoke access with the click of a button via the intuitive online portal.

Changes in employment status can be quickly and easily undertaken. The former or new employee details are activated or deactivated and all access rights are immediately granted or revoked.
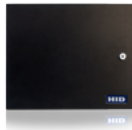

Quick-access buttons also allow for the immediate opening of all doors, or the securing of all doors, should there be an emergency.

* This offering is available in select countries only. Contact your local HID Global Partner to inquire.
